

The PRIMIGI size conversion chart helps to guide you in identifying the size of your child.

- Place the child's foot standing, resting the heel, along the dotted line.
- Draw a line at the big toe.
- The size above the line is the size of your baby's foot.
- The measurement should be carried out on both feet.
- When choosing the shoes it is advisable that there is at least 1/1.5 cm of space between the tip of the foot and the tip of the shoe.

Print this PDF on an A4 sheet, in 100% scale without fitting.

To verify that you have printed correctly, check that the distance between the dotted line of support of the heel at the line m.17, is actually 10 cm.
